Pharmacor Aciclovir
200 & Pharmacor Aciclovir 800
Contains the active ingredient aciclovir

What is in this leaflet

Read this leaflet carefully before taking your medicine.

This leaflet answers some common questions about aciclovir. It does not contain all the available information. It does not take the place of talking to your doctor or pharmacist.

The information in this leaflet was last updated on the date listed on the last page. More recent information on this medicine may be available.

Ask your doctor or pharmacist:
• if there is anything you do not understand in this leaflet,
• if you are worried about taking your medicine, or
• to obtain the most up-to-date information.

All medicines have risks and benefits. Your doctor has weighed the risks of you using this medicine against the benefits they expect it will have for you.

Pharmaceutical companies cannot give you medical advice or an individual diagnosis.

Keep this leaflet with your medicine. You may want to read it again.

What this medicine is used for

The name of your medicine is Pharmacor Aciclovir 200 or Pharmacor Aciclovir 800. It contains the active ingredient aciclovir.

The 200mg strength is used to:
• treat genital herpes. It makes an outbreak of genital herpes shorter and less severe.
• prevent or reduce the number of outbreaks of genital herpes in people who experience them often. In this case it is used for a long period of time.

The 800mg strength is used:
• to treat shingles, also known as herpes zoster. Shingles is caused by the same virus which causes chicken pox. It usually involves nerve pain and a blistered rash, limited to one area of the body. If taken within 72 hours of first getting the rash, aciclovir makes an outbreak of shingles shorter and less severe.
• as part of the management program for certain infections in people who have the human immunodeficiency virus (HIV). HIV is the virus that causes acquired immune deficiency syndrome (AIDS). Aciclovir does not cure AIDS or get rid of the HIV virus from your body, but it may prevent further damage to the immune system by stopping production of the herpes viruses.

Ask your doctor if you have any questions about why this medicine has been prescribed for you. Your doctor may have prescribed this medicine for another reason.

This medicine is available only with a doctor’s prescription.

How it works

Aciclovir belongs to a group of medicines called “anti-virals”. It works by stopping the production of the virus that causes herpes and shingles.

Aciclovir does not get rid of the virus from your body.

There is no evidence that this medicine is addictive.

This medicine is not expected to affect your ability to drive a car or operate machinery, but make sure you know how it affects you before driving.

Use in children

There is not enough information to recommend the use of this medicine for children.
Before you take this medicine

When you must not take it

Do not take this medicine if:

- You have had an allergic reaction to aciclovir, valaciclovir or any of the ingredients listed at the end of this leaflet.

Symptoms of an allergic reaction may include shortness of breath, wheezing or difficulty breathing; swelling of the face, lips, tongue, throat or other parts of the body, rash, itching or hives on the skin.

- The expiry date (EXP) printed on the pack has passed.

- The packaging is torn, shows signs of tampering or it does not look quite right.

Before you start to take it

Before you start taking this medicine, tell your doctor if:

1. You have allergies to:
   - any other medicines
   - any other substances, such as foods, preservatives or dyes.

2. You have or have had any medical conditions, especially the following:
   - kidney or liver problems
   - neurological disorders such as muscle weakness, paralysis, seizures, confusion, etc
   - altered electrolytes (salts) in your body
   - lack of oxygen in your blood
   - severe side effects from a cytotoxic (anti-cancer) medicine.

3. You are currently pregnant or you plan to become pregnant. Your doctor will discuss the risks and benefits involved.

4. You are currently breastfeeding or you plan to breastfeed. Your doctor will discuss the risks and benefits involved.

5. You are planning to have surgery or an anaesthetic.

6. You are currently receiving or are planning to receive dental treatment.

7. You are taking or are planning to take any other medicines. This includes vitamins and supplements that are available from your pharmacy, supermarket or health food shop.

Some medicines may interact with aciclovir. These include:

- probenecid, a medicine commonly used to treat gout
- diuretics, also called fluid tablets
- interferon, used to treat multiple sclerosis, hepatitis, leukaemia, Hodgkin’s lymphoma and other diseases
- methotrexate given by injection into the spine to treat cancer and leukaemia
- cimetidine, used for stomach problems
- mycophenolate mofetil, used by people with organ transplants.

If you are taking any of these you may need a different dose or you may need to take different medicines.

Other medicines not listed above may also interact with aciclovir.

How to take this medicine

Follow carefully all directions given to you by your doctor or pharmacist. Their instructions may be different to the information in this leaflet.

How much to take

Your doctor or pharmacist will tell you how much of this medicine you should take. This will depend on your condition and whether you are taking any other medicines.

The doses below may be lower if you have problems with your kidneys.

Genital herpes

To treat an outbreak of genital herpes, the usual dose of aciclovir is one 200mg tablet every four hours while awake (a total of 5 tablets daily) for 5 or 10 days.

Start taking it as advised by your doctor.

To prevent or reduce the number or outbreaks of herpes, the usual dose is one 200mg tablet three times a day for up to 6 months. Some people may be told by their doctor to take the tablet twice a day.

Some people who have repeated outbreaks of herpes take aciclovir for 5 days each time they have an outbreak. If this applies to you, it is important to start taking aciclovir at the first sign of an outbreak.

Shingles

To treat shingles, the usual dose of aciclovir is one 800mg tablet every four hours while awake (a total of 5 tablets daily), usually taken for 7 days (or up to 10 days if your eyes are affected by shingles).

Start taking aciclovir as soon as possible, and within 72 hours of the rash appearing.

Suggested times to take this medicine are 7 a.m., 11 a.m., 3 p.m., 7 p.m. and 11 p.m. You may prefer to take this medicine at different times to suit your daily schedule, but you should take them approximately every 4 hours.

Management of HIV

The usual dose of aciclovir in the management of HIV is one 800mg tablet four times a day, every six hours.

Do not stop taking your medicine or change your dosage without first checking with your doctor.
How to take it
The tablets should be swallowed whole with a full glass of water or dispersed in a quarter of a glass of water (about 50mL) and then swallowed.

When to take it
Take this medicine at the same time each day. Taking it at the same time each day will have the best effect and will also help you remember when to take it.

It does not matter if you take it before, with or after food.

How long to take it for
Keep taking aciclovir until you finish the pack or for as long as your doctor recommends.

Do not stop taking this medicine even if you feel better after a few days, unless advised by your doctor. Your infection may not clear completely if you stop taking this medicine too soon.

Make sure you have enough to last over weekends and holidays.

If you forget to take it
If it is almost time to take your next dose, skip the missed dose and take your next dose at the usual time. Otherwise, take it as soon as you remember and then go back to taking your medicine as you would normally.

Do not take a double dose to make up for missed doses.
This may increase the chance of unwanted side effects.
If you have trouble remembering to take your medicine, ask your pharmacist for some hints to help you remember.

If you take too much (overdose)
If you think that you or anyone else may have taken too much of this medicine, immediately telephone your doctor or the Poisons Information Centre (Tel: 13 11 26 in Australia) for advice. Alternatively go to the Accident and Emergency Department at your nearest hospital.

Do this even if there are no signs of discomfort or poisoning. You may need urgent medical attention.

If you take too much of this medicine, you may feel or be sick, have a headache and/or feel confused.

While you are taking this medicine
Things you must do
Drink plenty of fluids.
If you feel that your condition is not improving or is getting worse, see your doctor.

Tell your doctor that you are taking this medicine if:
• you are about to be started on any new medicine
• you are pregnant or are planning to become pregnant
• you are breastfeeding or are planning to breastfeed
• you are about to have any blood tests
• you are going to have surgery or are going into hospital.
Your doctor may occasionally do tests on your blood or urine to check for side effects and see how your kidneys are working. Go to your doctor regularly for a check-up.
Tell any other doctors, dentists and pharmacists who are treating you that you take this medicine.

Things you must not do
Do not:
• Give this medicine to anyone else, even if their symptoms seem similar to yours
• Take your medicine to treat any other condition unless your doctor or pharmacist tells you to
• Stop taking your medicine, or change the dosage, without first checking with your doctor.

Things to be careful of
Genital herpes can be caught from, or spread to, your partner during sexual activity. It is important to remember that this medicine will not keep you from spreading herpes to others.
Be careful when driving or operating machinery until you know how this medicine affects you.

Possible side effects
Tell your doctor or pharmacist as soon as possible if you do not feel well while you are taking aciclovir or if you have any questions or concerns.

Do not be alarmed by the following lists of side effects. You may not experience any of them. All medicines can have side effects. Sometimes they are serious but most of the time they are not.

Tell your doctor or pharmacist if you notice any of the following and they worry you.
This list includes the more common side effects. Mostly, these are mild:
• Stomach problems such as nausea (feeling sick), vomiting (being sick), diarrhoea, constipation, stomach pain
• Changes in taste sensation, loss of appetite, weight loss
• Dizziness/giddiness or headache
• Difficulty sleeping
• Mild skin reactions (e.g. rash, itching, hives, overreaction to the sun)
• Increased hair loss
• Weakness, fatigue, lack of energy, tiredness
• Aching, leg pains, muscles pains, joint pain, muscle cramps
• Menstrual problems.

Tell your doctor as soon as possible if you notice any of the following. These may be serious side effects. You may need medical attention. Most of these side effects are rare.

• confusion
• depression, agitation, irritability
• unusual thoughts or actions, hallucinations (seeing, feeling or hearing things that are not there)
• shakiness/trembling
• difficulty speaking
• uncoordinated movements, i.e. unsteady walking
• fever, sore throat, swollen glands
• blood problems (e.g. feeling tired and weak, fever, frequent infections, unusual bruising or bleeding or swelling around wounds)
• fluid retention
• eye problems (inflamed eye).

If you experience any of the following, STOP taking your medicine and contact your doctor immediately or go to the Accident and Emergency department at your nearest hospital. These are very serious side effects and are usually very rare. You may need urgent medical attention or hospitalisation.

• Yellowing of the skin and/or eyes (jaundice) or other liver problems with a collection of symptoms which may include: mental confusion, drowsiness, restlessness, itching and unconsciousness
• Kidney problems e.g. too much or too little urine, or pain when urinating, or pain in the kidneys
• Troubled breathing
• Chest pain, fast heart beat (palpitations)
• Convulsion (fits)
• Becoming unconscious or in a coma
• Signs of serious allergic reaction (see below)
• Signs of a blood clot such as a swollen and painful area in your leg, and swelling in your foot or ankle.

Other side effects not listed above may occur in some patients.

Allergic reactions
If you think you are having an allergic reaction to aciclovir, tell your doctor immediately or go to the Accident and Emergency department at your nearest hospital.

Symptoms of an allergic reaction may include some or all of the following:

• cough, shortness of breath, wheezing or difficulty breathing.
• swelling of the face, lips, tongue, or other parts of the body
• rash, itching or hives on the skin
• fainting
• hayfever-like symptoms

Storage and disposal

Storage

Keep your medicine in its original packaging until it is time to take it. If you take your medicine out of its original packaging it may not keep well.

Keep your medicine in a cool dry place where the temperature will stay below 25°C.

Do not store your medicine, or any other medicine, in the bathroom or near a sink. Do not leave it on a window sill or in the car. Heat and dampness can destroy some medicines.

Keep this medicine where children cannot reach it.

A locked cupboard at least one-and-a-half metres above the ground is a good place to store medicines.

Disposal

If your doctor or pharmacist tells you to stop taking this medicine or they have passed their expiry date, your pharmacist can dispose of the remaining medicine safely.

Product description

What Pharmacor Aciclovir 200 and Pharmacor Aciclovir 800 looks like

Pharmacor Aciclovir 200 tablets are round, blue, flat-faced, bevel-edged tablets, engraved "APO" over "200" on one side and the other side plain. Blister packs of 90 tablets.*
